

Summary

Unhealthy for Sensitive Group levels occurred in the DAQ network starting in the 11:00 PST hour and continued through the 18:00 PST hour. Moderate levels occurred much of the day at many sites, including every hour at the Boulder City site. This exceedance caused may have occurred due to multiple influences.

Charts and trajectory plots show air transport from the SoCal deserts with pollutants corresponding to ozone impacts in the LV area. This transport factor was enhanced by weak dispersion occurring in the latter part of the day.
